

Report from the St. Lawrence Church Magazine on Science Week 2006

During Science Week, pupils at St. Lawrence School, Towcester, were given the opportunity to build crystal radios from kits. The RSGB provided a range of books, posters and leaflets concerning Amateur Radio in advance of the event. The books are now in the School library.

The first group, of seven children of mixed ages, 7 to 11, met with the instructor and the Headteacher on Friday 17th March, during their "Golden Time". Amid a good deal of excitement, all seven were able to produce working crystal sets from kits supplied, within the 45 minutes available. This was a great achievement for all concerned!

A second group of six children met on the 24th March and were also successful in building the radios.
